SUMMARY

Staff-level engineer with 7 years driving technical direction across large-scale cloud platforms at Cisco and Oracle. Known for setting engineering standards that scale, shipping AI-powered developer tooling, and influencing practices across 50+ service teams.

SKILLS

AI / ML	LLM APIs (OpenAI, Claude/Anthropic), RAG Pipelines, Prompt Engineering, AI Agent Design, LangChain
Languages	JavaScript / TypeScript, Python, Java, Kotlin
Frontend	React, Preact, Redux, Next.js, Angular, Playwright (E2E), Jest
Backend & Cloud	Node.js, REST APIs, Microservices, AWS, OCI, Kubernetes, Docker, Kafka, Terraform, Jenkins, Argo CD, Git, Agile
Databases	Cassandra, Amazon Neptune, MongoDB, PostgreSQL, Redis

EXPERIENCE

Oracle Corporation (Oracle Cloud Infrastructure – OCI)May 2025 – Present

Senior Member of Technical Staff

- Defined and drove org-wide end-to-end testing standards for all OCI Console plugins — authored the canonical framework covering Playwright setup, auth infrastructure, test suite structure, build service execution, and automated Jira task management for CI failure triage; partnered with and mentored engineers across multiple service teams to drive adoption, making it the mandated baseline across 50+ OCI service teams.
- Designed and deployed an AI agent that parses UI spec docs and auto-generates production-ready, config-driven components using Oracle's Redwood/MAUI design system — reducing component build time by an estimated 60–70% and widely adopted across all OCI service teams.
- Built a white-label cloud configurator for OCI Alloy, enabling 10+ initial deployments architected to scale across 50+ partner cloud environments — a foundational piece of Oracle's global sovereign cloud strategy.
- Engineered scalable UI features using Preact for the OCI Console, improving Time to Interactive by 1.6s and achieving 38% faster load times across 15+ OCI services used by 100K+ enterprise users.

Cisco Systems (Cisco Spaces Division)July 2019 – May 2025

Software Engineer III

- Designed and developed "Smart Workspaces", a location analytics solution (React, Java) that became the flagship product driving a ~50% increase in revenue.
- Built backend APIs (Kotlin) and frontend interfaces (Redux) to extract spatial heatmap data from Cassandra and Amazon Neptune — enabling daily utilization tracking and contributing to \$1B in subscription sales growth.
- Led a team in delivering a next-gen cloud-based (AWS) business analytics platform — defining the technical approach and scaling the product to ~8,500 companies worldwide.
- Supervised engineering and QA to ship a recommendation system in Java/Kotlin, increasing department revenue by USD 2.5 million.

EDUCATION

PES University, BangaloreAug 2015 – July 2019

B.Tech, Electronics and Communications Engineering • Academic Distinction (Top 10%, GPA 8.15/10)
